HARATAKI TANUKI

AI-Powered Reimbursement Management
— Smarter, Faster, Fully Automated.

Reimbursement should be simple... but is it?

Employee

- Upload bills in Slack 😞 or manually print.
- Type amounts manually in chat Message
- Wait... and follow up again

HR

- Messages everywhere
- Hard to track who submitted what
- Easy to miss payments

- ✗ Scattered bills (Slack, chats, files)
- ✗ Manual entry = errors & wrong amounts
- ✗ No visibility → "Mero bill approve vayo ki nai?"
- ✗ HR overwhelmed → tracking becomes impossible
- ✗ Some payments even get missed

Why We Chose This Problem

At JoBins, the focus is clear —

👉 moving towards full automation and efficiency

While many systems are evolving,

We noticed one area still full of manual hassle:

- Reimbursement process
- Both Japan & Nepal teams struggling
- Time-consuming, error-prone, and hard to track

So, within limited hackathon time,

👉 we chose to solve a real, everyday problem using AI

💡 **So we built: HARATAKI TANUKI**
An AI-powered reimbursement system

Upload bill

Employee logs in → Views monthly summary & history on dashboard → Uploads multi-photo bills with category tagging → AI extracts all data in background → Reviews & edits extracted details → Submits with instant email notification sent automatically.

Admin: Review & Approve

Admin logs in → Views dashboard with monthly totals & category queues → Reviews by target category (new items on top) → Inspects each bill → Marks as reviewed (triggers category & monthly auto-update) → Adjusts claimable amounts or rejects if needed → Reimburse button appears once fully reviewed.

Close the Loop

Monthly totals updated in real time. Employee sees final reimbursed amount clearly in their dashboard. Both parties can log out with full confidence — no emails chased, no spreadsheets touched.

Product Walkthrough

Employee

- Login → Dashboard (monthly summary & history)
- Upload bills (multi-photo + category)
- AI extraction → Preview & edit amounts
- Finalize → Submit with instant email notification

Admin

- Login → Dashboard (monthly + category queues)
- Review → Target by category (new items on top)
- Mark Reviewed → Category totals auto-update
- Reimburse → Button appears when fully reviewed

What makes it powerful?

Time Saved

Employees no longer spend hours collecting, formatting, and emailing receipts. Admins skip manual data entry and policy checks entirely. Both sides get back hours every month to focus on what they do best.

Efficiency Improved

AI extraction eliminates manual entry errors. Automated category limit checks and smart totaling replace tedious spreadsheet work. Approval queues stay clear, and payout cycles shrink from weeks to days.

Full Transparency

Employees always know their submission status, category totals, and expected reimbursement — no more chasing the accounts team. Trust is built into the system through real-time visibility and submission locking.

Audit-Ready Integrity

Submission locking, category-wise admin review, and auto-generated totals ensure the process is consistent, compliant, and fully traceable — a clean audit trail with zero manual reconciliation.

User flow of the system

How We Built It — Week by Week

Week 1

Research & Topic Selection

Explored pain points in expense management. Identified the reimbursement gap. Aligned as a team on HARATAKI TANUKI as our focus.

Week 3

Brainstorm & Iteration

Challenged assumptions, refined UI screens, and brainstormed AI extraction approach. Debated edge cases like submission locking and category limits.

Week 5

Testing & Demo Prep

End-to-end testing across employee and admin flows. Fixed edge cases, polished the UI, and prepared the live demo walkthrough for presentation day.

Week 2

Flow Design & Wireframing

Mapped out the employee and admin flows. Created wireframes, discussed the workflow end-to-end, and validated the core UX logic together.

Week 4

Development & Integration

Backend built AI pipeline and business logic. Frontend brought designs to life. Integrated both layers to create a cohesive, functional product.

How Our Work Reflects JoBins Values

Full Speed

No longer need to manually review and enter bills in Excel. At the same time, the verification process for admins becomes much simpler and more efficient. Overall, the workflow becomes faster, smoother, and operates at full speed.

Chance for All

We distributed tasks based on individual strengths, ensuring every team member contributed and grew together.

Learn from Failure

Throughout the journey, we faced multiple challenges. But by learning from each issue, we improved continuously and made the project successful.

This is not just a project — it's a step towards JoBins Automation.
